

CURRICULUM VITAE (CVA)

IMPORTANT – The Curriculum Vitae cannot exceed 4 pages. Instructions to fill this document are available in the website.

Part A. PERSONAL INFORMATION

CV date	29/01/2023
---------	------------

First name	Bárbara		
Family name	Ondiviela		
Gender (*)	Female	Birth date	13/01/1974
ID number	20202771P		
e-mail	ondiviela@gmail.com	URL Web	
Open Research and Contributor ID (ORCID)(*)		0000-0001-6902-1166	

(*) Mandatory

A.1. Current position

Position	Researcher		
Initial date	01/05/2011		
Institution			
Department/Center	Environmental Hydraulics Institute Foundation		
Country	Spain	Teleph. number	9421616
Key words	Hydrobiology, marine ecology, habitat suitability, species distribution modelling, marine spatial planning		

A.2. Previous positions (research activity interruptions, art. 45.2.c))

Period	Position/Institution/Country/Interruption cause		
2011- Present	Researcher/ Environmental Hydraulics Institute/Spain		
01/05/2009- 2011	Postdoctoral Researcher/ Environmental Hydraulics Institute/Spain		
01/11/2008-30/04/2009	Postdoctoral researcher/Marine Biological Laboratory /USA		
01/01/2007-31/10/2008	Postdoctoral researcher/University of Cantabria/Spain		
01/09/2002-31/12/2006	Predoctoral researcher/University of Cantabria/Spain		
01/01/1999-31/08/2002	Research assistant/Scientific Association of Marine Studies/Spain		
01/05/1999-01/08/1999	Research assistant/University of Iceland/ Iceland		
01/10/1997-30/04/1999	Research assistant/Scientific Association of Marine Studies/Spain		

A.3. Education

PhD, Licensed, Graduate	University/Country	Year
Graduate in Marine Sciences	University of las Palmas de Gran Canaria	1992-1997
PhD in Marine Sciences	University of Cantabria	2006

Part B. CV SUMMARY (max. 5000 characters, including spaces)

Bárbara Ondiviela Eizaguirre is PhD in Marine Sciences. She was a postdoctoral research fellow at the Marine Biological Laboratory (USA, Anne Giblin) and at the University of Cantabria. Since 2009 she is researcher at the Environmental Hydraulics Institute of the University of Cantabria (IHCantabria). Her research has been mainly focused on disciplines such as environmental ecohydraulics laboratory experiments, marine ecology and assessment of the effects of human activities and climate change on coastal ecosystems. This activity has given rise to basic knowledge and significant contributions on the biophysical interrelations in coastal systems, the development of methods and tools for the assessment of water quality in port areas and the conservation status of habitats of European interest and the marine planning. At present her research interests are focused on the ecology of seagrasses; on the use of remote sensing-based techniques to improve our understanding on the role of coastal ecosystems to

face the climate change; and on the development of algorithms for the use of remote sensing in the estimation of carbon sequestration in living biomass of estuarine vegetation. The beginning of these research interests was the European project THESEUS (FP7-ENV-2009-1). This project examined innovative technologies for coastal mitigation and adaptation to climate change, from biological/ physical and field/ laboratory experimentation with coastal ecosystems (Bouma et al., 2014; Hanley et al., 2014; Ondiviela et al., 2014). The contributions of this project were a turning point in her research career and for the last decade, her research interests in this topic have evolved through collaborations with well-known international research centres (e.g. NIOZ, The Netherlands; University of Coimbra; University of Padova; University of Groninge, IMEDEA, etc).

Principal scientist of 10 R&D projects funded by Regional, National and European agencies. She has participated in more than 20 R&D projects at National and European level and in more than 30 projects for knowledge transfer. The topics covered by these projects are different, but between the recent ones the most related to Blue Carbon are the European Projects: -“Adaptation to climate change through management and restoration of European estuarine ecosystems” (LIFE-ADAPTA BLUES); -“Marine biodiversity and ecosystem functioning leading to ecosystem services (MARBEFES)” and at National level -“Environmental restoration beyond biodiversity: how to integrate estuarine ecosystem services into nature-based management (MarshA; IP); -“Advancing the understanding of biological diversity and ecosystem functioning through spectral analysis (DIES; IP)”; and -“Monitoring network to characterise and assess the conservation status of *Zostera noltei* (habitat 1140) in the Atlantic Biogeographical Region (PRADERA, IP)” (publications included in section C). She has also coordinated the drafting of the Technical Bases of the Management Plans of the 21 SACs of the Natura 2000 Network of Cantabria, published as: DECREE 18/2017; Decree 19/2017 and Decree 39/2019.

She has published 38 articles in journals included in the JCR (26 Q1), 4 Books and 8 book chapters (H-index; 16 and 1080 cites). She has Supervised 3 doctoral Thesis (+1 under development) and 10 Master's Theses with official quality awards. She has been part of the evaluation committee of national and international Thesis, and numerous Master Thesis. She is member of the Academic Committee of the PhD Program in Coastal Engineering, Hydrobiology and Management of Aquatic Systems "IH2O". She received the National Environment Award "AQUA", from the Spanish Ministry of the Environment (2003) for the contribution of her research group to the development of the Environmental design of sanitation systems in coastal areas. And, she has experience in the organization of R&D activities, with an outstanding presence in the Organizing Committee of the XII National Congress of the Iberian Limnology Association (Santander, 2014). She is co-coordinator of the MOOC ROM 5.1 “Water Quality in Port areas” given at the MiriadaX Platform (5,800 students enrolled in 8 editions) and awarded (2014) by Universia Network, Telefónica Learning Services and the Ibero-American General Secretariat. She has participated in different transfer and dissemination projects (e.g. Erasmus+), specialization courses (Erasmus mundus, National Port Administration, AQUALOGY, Port Authority of Gijon) and summer courses (e.g. US American Army).
